

# **ATS-7**

## **MOBAT FAD1410/FAD1410-A3 (WIMA) ANTENNA MOUNTING BRACKET**

The WIMA automatic tuning antenna made by Elbit/Mobat is a very popular antenna made specifically to interface with the Micom-2 and Micom-3 series of high frequency (HF) transceivers.

Mounting this antenna on a vehicle or fixed station can present some challenges due to the design of the base and the weight of this antenna.

The ATS-7 is designed to make that job easier.

~~~~~

The ATS-7 is a high quality bracket made of steel and black power coated to protect it from the outdoor elements.

Each bracket comes equipped with a stainless steel bolt that serves as a connection point between the WIMA ground strap and the vehicle body/ground.

The bracket can be used with either 1 1/4 or 1 3/4 inch U-bolts (sold separately) when mounting to a pipe.

The WIMA antenna is a great choice for setting up a deployable fixed station and we also make a tactical tripod kit (ATS-8) that makes installation a breeze when used with the ATS-7 bracket.

In addition there are four 5/16" holes for use with bolts when mounting to a wall or other flat surface.

#### PRICING

ATS-7 bracket \$155.00

ATS-7Z1 bracket with 2 zinc 1 1/4" U-bolts..\$159.00
